The **Series 3HBAV** is an electrical ball valve ideal for flow control in hot and cold water HVAC systems. These valves are typically used in conjunction with air conditioning systems, heating systems, water treatment and production industries. The 3HBAV is electrically driven open and/or closed via a bidirectional AC motor. The electrical valve offers a detachable actuator with position switches and indicator. The 3HBAV is available with modulating or floating actuators.

FEATURES

- Manual override
- Detachable actuator
- High Cv values
